## Therapeutic Antibodies

Several aspects of clinical medicine are poised on the edge of a new era with the introduction of therapeutic antibodies. This revolution has been made possible by major advances in immune technology, which are now beginning to mature into clinical practice. This volume is aimed at all clinicians involved with this form of treatment, especially accident and emergency physicians, clinical immunologists, and pharmacologists. It covers both the basic technology, and also all the main clinical areas of application: septic shock, auto-immune disease, and cancer. The future of therapeutic antibodies is also discussed, including exciting new developments in "catalytic antibodies". This is the first occasion on which all these topics have been brought together in a single volume, thus making it an important reference source for physicians and researchers in this fast-moving area.
